

## TEST 2, WRITING TASK 1

### MODEL ANSWER

This model has been prepared by an examiner as an example of a very good answer. However, please note that this is just one example out of many possible approaches.

The charts show how much a UK school spent on different running costs in three separate years: 1981, 1991 and 2001.

In all three years, the greatest expenditure was on staff salaries. But while other workers' salaries saw a fall from 28% in 1981 to only 15% of spending in 2001, teachers' pay remained the biggest cost, reaching 50% of total spending in 1991 and ending at 45% in 2001.

Expenditure on resources such as books had increased to 20% by 1991 before decreasing to only 9% by the end of the period. In contrast, the cost of furniture and equipment saw an opposite trend. This cost decreased to only 5% of total expenditure in 1991 but rose dramatically in 2001 when it represented 23% of the school budget. Similarly, the cost of insurance saw a rising trend, growing from only 2% to 8% by 2001.

Overall, teachers' salaries constituted the largest cost to the school, and while spending increased dramatically for equipment and insurance, there were corresponding drops in expenditure on things such as books and on other workers' salaries.
